## Elementary Statistics

 Tenth Editionand the Triola Statistics Series

by Mario F. Triola

# Chapter 2 Summarizing and Graphing Data 

## 2-1 Overview

2-2 Frequency Distributions
2-3 Histograms
2-4 Statistical Graphics

## Section 2-1 Overview

Created by Tom Wegleitner, Centreville, Virginia

## Overview Important Characteristics of Data

1. Center: A representative or average value that indicates where the middle of the data set is located.
2. Variation: A measure of the amount that the values vary among themselves.
3. Distribution: The nature or shape of the distribution of data (such as bell-shaped, uniform, or skewed).

4. Outliers: Sample values that lie very far away from the vast majority of other sample values.
5. Time: Changing characteristics of the data over time.

## Section 2-2 Frequency Distributions

Created by Tom Wegleitner, Centreville, Virginia

## Key Concept

When working with large data sets, it is often helpful to organize and summarize data by constructing a table called a frequency distribution, defined later. Because computer software and calculators can generate frequency distributions, the details of constructing them are not as important as what they tell us about data sets.

## Definition

## Frequency Distribution (or Frequency Table)

lists data values (either individually or by groups of intervals), along with their corresponding frequencies or counts

| Table 2-1 |  |  | Academy Awards: Ages of Best Actresses and Best Actors |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| The ages (in years) are listed in order, beginning with the first awards ceremony. |  |  |  |  |  |  |  |  |  |
| Best Actresses |  |  |  |  |  |  |  |  |  |
| 22 | 37 | 28 | 63 | 32 | 26 | 31 | 27 | 27 | 28 |
| 30 | 26 | 29 | 24 | 38 | 25 | 29 | 41 | 30 | 35 |
| 35 | 33 | 29 | 38 | 54 | 24 | 25 | 46 | 41 | 28 |
| 40 | 39 | 29 | 27 | 31 | 38 | 29 | 25 | 35 | 60 |
| 43 | 35 | 34 | 34 | 27 | 37 | 42 | 41 | 36 | 32 |
| 41 | 33 | 31 | 74 | 33 | 50 | 38 | 61 | 21 | 41 |
| 26 | 80 | 42 | 29 | 33 | 35 | 45 | 49 | 39 | 34 |
| 26 | 25 | 33 | 35 | 35 | 28 |  |  |  |  |
| Best Actors |  |  |  |  |  |  |  |  |  |
| 44 | 41 | 62 | 52 | 41 | 34 | 34 | 52 | 41 | 37 |
| 38 | 34 | 32 | 40 | 43 | 56 | 41 | 39 | 49 | 57 |
| 41 | 38 | 42 | 52 | 51 | 35 | 30 | 39 | 41 | 44 |
| 49 | 35 | 47 | 31 | 47 | 37 | 57 | 42 | 45 | 42 |
| 44 | 62 | 43 | 42 | 48 | 49 | 56 | 38 | 60 | 30 |
| 40 | 42 | 36 | 76 | 39 | 53 | 45 | 36 | 62 | 43 |
| 51 | 32 | 42 | 54 | 52 | 37 | 38 | 32 | 45 | 60 |
| 46 | 40 | 36 | 47 | 29 | 43 |  |  |  |  |

Original Data

## Frequency Distribution Ages of Best Actresses

| Table 2-2 <br> Frequency Distribution: <br> Ages of Best Actresses |  |
| :---: | :---: |
| Age of |  |
| Actress | Frequency |
| $21-30$ | 28 |
| $31-40$ | 30 |
| $41-50$ | 12 |
| $51-60$ | 2 |
| $61-70$ | 2 |
| $71-80$ | 2 |

Frequency Distribution

## Frequency Distributions

## Definitions

## Lower Class Limits

are the smallest numbers that can actually belong to different classes

## Table 2-2 <br> Frequency Distribution: <br> Ages of Best Actresses

Age of
Actress
Frequency
(21) $30 \quad 28$
(31) 4030
(41) 50

12
Limits

## Upper Class Limits

are the largest numbers that can actually belong to different classes

|  | Table 2-2 <br> Frequency Distribution: Ages of Best Actresses |
| :---: | :---: |
|  | Frequency |
|  | 28 |
| [ 37 -40 | 30 |
| $\mathrm{Pr}_{\text {P- }}^{\text {c- }}$ | 12 |
| 51-60 | 2 |
| $61-70$ | 2 |
| $71-80$ | 2 |

## Class Boundaries

are the numbers used to separate classes, but without the gaps created by class limits

| Table 2-2 <br> Frequency Distribution: <br> Ages of Best Actresses |  |
| :--- | :---: |
| Age of |  |
| Actress | Frequency |
| $21-30$ | 28 |
| $31-40$ | 30 |
| $41-50$ | 12 |
| $51-60$ | 2 |
| $61-70$ | 2 |
| $71-80$ | 2 |

## Class Midpoints

can be found by adding the lower class limit to the upper class limit and dividing the sum by two

Class Midpoints

|  | Ages of Best Actresses |  |
| :---: | :---: | :---: |
|  | Age of Actress | Frequency |
| 25.5 | 21-30 | 28 |
| 35.5 | 31-40 | 30 |
| $\sim 45.5$ | 41-50 | 12 |
| N 55.5 | 51-60 | 2 |
| - 65.5 | 61-70 | 2 |
| - 75.5 | 71-80 | 2 |

## Class Width

is the difference between two consecutive lower class limits or two consecutive lower class boundaries

| Table 2-2 <br> Frequency Distribution: <br> Ages of Best Actresses |  |
| :---: | :---: |
| Age of <br> Actress |  |
| $21-30$ | Frequency |
| $31-40$ | 28 |
| $41-50$ | 30 |
| $51-60$ | 12 |
| $61-70$ | 2 |
| $71-80$ | 2 |

## Reasons for Constructing Frequency Distributions

1. Large data sets can be summarized.
2. We can gain some insight into the nature of data.
3. We have a basis for constructing important graphs.

## Constructing A Frequency Distribution

1. Decide on the number of classes (should be between 5 and 20).
2. Calculate (round up).
class width $\approx$
(maximum value) - (minimum value) number of classes
3. Starting point: Begin by choosing a lower limit of the first class.
4. Using the lower limit of the first class and class width, proceed to list the lower class limits.
5. List the lower class limits in a vertical column and proceed to enter the upper class limits.
6. Go through the data set putting a tally in the appropriate class for each data value.

## Relative Frequency Distribution

includes the same class limits as a frequency distribution, but relative frequencies are used instead of actual frequencies

relative frequency $=\frac{\text { class frequency }}{\text { sum of all frequencies }}$

## Relative Frequency Distribution

| Table 2-2 <br> Frequency Distribution: <br> Ages of Best Actresses |  |
| :---: | :---: |
| Age of |  |
| Actress | Frequency |
| $21-30$ | 28 |
| $31-40$ | 30 |
| $41-50$ | 12 |
| $51-60$ | 2 |
| $61-70$ | 2 |
| $71-80$ | 2 |

| Table 2-3 <br> Relative Frequency <br> Distribution of Best <br> Actress Ages |  |
| :--- | :---: |
| Age of Relative <br> Actress Frequency |  |
| $21-30$ $37 \%$ <br> $31-40$ $39 \%$ <br> $41-50$ $16 \%$ <br> $51-60$ $3 \%$ <br> $61-70$ $3 \%$ <br> $71-80$ $3 \%$ |  |

Total Frequency $=76$

## Cumulative Frequency Distribution

| Table 2-2 <br> Frequency Distribution: <br> Ages of Best Actresses |  |
| :---: | :---: |
| Age of |  |
| Actress | Frequency |
| $21-30$ | 28 |
| $31-40$ | 30 |
| $41-50$ | 12 |
| $51-60$ | 2 |
| $61-70$ | 2 |
| $71-80$ | 2 |

| Table 2-4 <br> Cumulative Frequency <br> Distribution of Best <br> Actress Ages |  |
| :--- | :--- |
| Age of Cumulative <br> Actress Frequency |  |
| Less than 31 | 28 |
| Less than 41 | 58 |
| Less than 51 | 70 |
| Less than 61 | 72 |
| Less than 71 | 74 |
| Less than 81 | 76 |

## Frequency Tables

| Table 2-2 <br> Frequency Distribution: <br> Ages of Best Actresses |  |
| :---: | :---: |
| Age of |  |
| Actress | Frequency |
| $21-30$ | 28 |
| $31-40$ | 30 |
| $41-50$ | 12 |
| $51-60$ | 2 |
| $61-70$ | 2 |
| $71-80$ | 2 |

| Table 2-3 <br> Relative Frequency <br> Distribution of Best <br> Actress Ages |  |
| :--- | :---: |
| Age of Relative <br> Actress Frequency <br> $21-30$ $37 \%$ <br> $31-40$ $39 \%$ <br> $41-50$ $16 \%$ <br> $51-60$ $3 \%$ <br> $61-70$ $3 \%$ <br> $71-80$ $3 \%$ |  |

| Table 2-4 |  |
| :--- | :--- |
| Cumulative Frequency <br> Distribution of Best <br> Actress Ages |  |
| Age of |  |
| Actress | Cumulative |
| Less than 31 | 28 |
| Less than 41 | 58 |
| Less than 51 | 70 |
| Less than 61 | 72 |
| Less than 71 | 74 |
| Less than 81 | 76 |

## Critical Thinking Interpreting Frequency Distributions

In later chapters, there will be frequent reference to data with a normal distribution. One key characteristic of a normal distribution is that it has a "bell" shape.

The frequencies start low, then increase to some maximum frequency, then decrease to a low frequency.

The distribution should be approximately symmetric.

## Recap

In this Section we have discussed

- Important characteristics of data
* Frequency distributions
* Procedures for constructing frequency distributions
* Relative frequency distributions
* Cumulative frequency distributions

## Section 2-3 Histograms

## Key Concept

# A histogram is an important type of graph that portrays the nature of the distribution. 

## Histogram

A bar graph in which the horizontal scale represents the classes of data values and the vertical scale represents the frequencies

| Table 2-2 <br> Frequency Distribution: <br> Ages of Best Actresses |  |
| :--- | :---: |
| Age of |  |
| Actress | Frequency |
| $21-30$ | 28 |
| $31-40$ | 30 |
| $41-50$ | 12 |
| $51-60$ | 2 |
| $61-70$ | 2 |
| $71-80$ | 2 |

Copyright © 2007 Pearson Education, Inc Publishing as Pearson Addison-Wesley.

## Relative Frequency Histogram

## Has the same shape and horizontal scale as a

 histogram, but the vertical scale is marked with relative frequencies instead of actual frequencies| Table 2-3 |  |
| :--- | :---: |
| Relative Frequency |  |
| Distribution of Best |  |
| Actress Ages |  |

## Critical Thinking Interpreting Histograms

One key characteristic of a normal distribution is that it has a "bell" shape. The histogram below illustrates this.

## Recap

## In this Section we have discussed Histograms <br> Relative Frequency Histograms

## Section 2-4 Statistical Graphics

Created by Tom Wegleitner, Centreville, Virginia

## Key Concept

This section presents other graphs beyond histograms commonly used in statistical analysis.

The main objective is to understand a data set by using a suitable graph that is effective in revealing some important characteristic.

## Frequency Polygon

Uses line segments connected to points directly above class midpoint values

Copyright © 2007 Pearson Education, Inc Publishing as Pearson Addison-Wesley.

## Ogive

## A line graph that depicts cumulative frequencies

## Dot Plot

Consists of a graph in which each data value is plotted as a point (or dot) along a scale of values

## Stemplot (or Stem-and-Leaf Plot)

Represents data by separating each value into two parts: the stem (such as the leftmost digit) and the leaf (such as the rightmost digit)

| Stem (tens) | Leaves (units) |
| :---: | :--- |
| 2 | 12445555666677778888999999 |
| 3 | 0011122333334445555555677888899 |
| 4 | 011111223569 |
| 5 | 04 |
| 6 | 013 |
| 7 | 4 |
| 8 | 0 |$\quad \leftarrow$ Values are 50 and 54.

## Pareto Chart

A bar graph for qualitative data, with the bars arranged in order according to frequencies

Copyright © 2007 Pearson Education, Inc Publishing as Pearson Addison-Wesley.

## Pie Chart

## A graph depicting qualitative data as slices of a pie

## Scatter Plot (or Scatter Diagram)

A plot of paired $(x, y)$ data with a horizontal $x$-axis and a vertical $y$-axis

Copyright © 2007 Pearson Education, Inc Publishing as Pearson Addison-Wesley.

## Time-Series Graph

Data that have been collected at different points in time

Copyright © 2007 Pearson Education, Inc Publishing as Pearson Addison-Wesley.

## Other Graphs

Copyright © 2007 Pearson Education, Inc Publishing as Pearson Addison-Wesley.

## Recap

In this section we have discussed graphs that are pictures of distributions.

Keep in mind that a graph is a tool for describing, exploring and comparing data.
